INFORMATION SYSTEMS FOR TRANSPORT, FORWARDING AND LOGISTICS

# Road Freight Hauliers

The OLTIS Group TMS (Transportation Management System) offers a comprehensive solution for road freight hauliers who need to streamline their in-house processes, make better use of fleets and increase

driver productivity. It also provides a specialized solution for tanks. The advantage of this solution is the openness and flexibility of the system that allows an easy system integration in transport companies.

## Overview of Topics Addressed

<b>Orders</b>	Recording and tracking the status of customer orders made by importing, manually, or through the web portal, recording damage.
<b>Transport</b>	Planning in a dispatching timetable, using map data followed by status monitoring, including automatic notifications.
<b>Pricelist and calculations</b>	Management of supplier and customer-specific tariffs, automated calculations.
<b>Invoicing</b>	Issuing of simple and collective revenue invoices, inspection and accounting of cost invoices, including corrective documents.
<b>Drivers</b>	Personnel agenda for drivers, including document validity records, attendance records and driver evaluation.
<b>Fleet park</b>	Complete fleet register, including monitoring the validity of insurance, service and certification, recording of accidents.
<b>Vehicle operation records</b>	Record of actual shipment (STAZ), vehicle status, including fuel consumption records and driver expenses.
<b>Subsistence allowance and wages</b>	Processing documentation for subsistence allowance and wages based on realized transport, records of deductions and rewards.
<b>Servicing</b>	Creating servicing plans, planning and records of servicing performed, spare part records.
<b>Mobile application</b>	Bi-directional communication of the dispatcher with the driver, on-line data collection by the driver during transport, creating electronic STAZ.
<b>Controlling</b>	Continuous evaluation of the company activities in the form of a series of dynamic overviews and reports, with the possibility of using data warehouses.
<b>Web portal</b>	Web extension for taking customer orders and their track & trace.
